* Office Action Summary	Examiner	Art Unit			
	David E. England	2143			
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REI THE MAILING DATE OF THIS COMMUNICATION - Extensions of time may be available under the provisions of 37 CFR after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a - If NO period for reply is specified above, the maximum statutory perion - Failure to reply within the set or extended period for reply will, by state - Any reply received by the Office later than three months after the material patent term adjustment. See 37 CFR 1.704(b). Status	N. It 1.136(a). In no event, however, may a re- reply within the statutory minimum of thirty iod will apply and will expire SIX (6) MON- atute, cause the application to become ABA	eply be timely filed y (30) days will be considered timely. THS from the mailing date of this communication. ANDONED (35 U.S.C. § 133).			
1) Responsive to communication(s) filed on 2	28 April 2003 .				
2a) ☐ This action is FINAL. 2b) ☑	This action is non-final.				
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213. Disposition of Claims					
4)⊠ Claim(s) <u>16-20</u> is/are pending in the applica	ation				
4a) Of the above claim(s) is/are withdrawn from consideration.					
5) Claim(s) is/are allowed.					
6)⊠ Claim(s) <u>16-20</u> is/are rejected.					
7) ☐ Claim(s) <u>10-20</u> is/are rejected. 7. ☐ Claim(s) is/are objected to.					
8) Claim(s) is/are objected to.					
Application Papers					
9) The specification is objected to by the Exam	iner.				
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.					
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).					
11) The proposed drawing correction filed on is: a) approved b) disapproved by the Examiner.					
If approved, corrected drawings are required in reply to this Office action.					
12) The oath or declaration is objected to by the Examiner.					
Priority under 35 U.S.C. §§ 119 and 120					
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).					
a) All b) Some * c) None of:					
1. Certified copies of the priority documents have been received.					
2. Certified copies of the priority documents have been received in Application No					
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.					
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).					
a) The translation of the foreign language 15) Acknowledgment is made of a claim for dome	provisional application has be	en received.

Art Unit: 2143

DETAILED ACTION

1. Claims 16 - 20 are presented for examination.

Claim Objections

1. Claims 16 – 18 are objected to because of the following informalities: The term "prior art" is a term that is not commonly used in claim language and makes a claim more susceptible to rejection because the claim is not claiming anything novel and/or new that could be allowable. Appropriate correction is required.

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. The term "etc." in claim 20 is a relative term which renders the claim indefinite. The term "etc." is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.
- 3. Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "metrics" is not described in the specification in a way to have one of ordinary skill in the art to interpret the term in a way to make the claim allowable.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 4. Claim 16 is rejected under 35 U.S.C. 102(e) as being anticipated by Raab et al. U.S. Patent No. 6047321 (hereinafter Raab).
- 5. Referencing claim 16, Raab teaches a method for distributed remote network monitor (dRMON) in a LAN comprising: deploying dRMON agents within ESs said agents implementing prior art RMON functional groups but only capturing and analyzing packets that their native ES sends or receives, (e.g. col. 4, lines 5 57); on a regular, periodic basis having the dRMON agents forward statistics and/or captured packets to a dRMON proxy or collector, existing somewhere on the WAN/LAN, (e.g. col. 4, lines 5 57); and combining received agent data thereby creating at the proxy the view that a prior, art stand-alone RMON probe would have if all the ES were on the same LAN segment with it, (e.g. col. 4, lines 5 57).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 17 and 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Raab (6047321) in view of Dobbins et al. (5790546) (hereinafter Dobbins).

Application/Control Number: 09/518,221

Art Unit: 2143

- 8. As per claim 17 an understood by the Examiner, Raab does not specifically teach said proxy can mimic the SNMP responses of a prior art non-distributed RMON probe so that existing network application management software can interact with the proxy as though the proxy were a prior art probe. Dobbins teaches said proxy can mimic the SNMP responses of a prior art non-distributed RMON probe so that existing network application management software can interact with the proxy as though the proxy were a prior art probe, (e.g. col. 16, lines 4 26). It would have been obvious to one skilled in the art at the time the invention was made to combine Dobbins with Raab because it would be more efficient for a system to utilize the same functions that a probe has and apply them to a proxy so have all functions of both devices in one device that could save time on transmission time and prevent errors in transmissions to and from the proxy and probe. Furthermore, Applicant discloses that this has been used in the prior art as stated in the claim itself.
- 9. As per claim 18, as understood by the Examiner, Raab teaches all that is disclosed above but does not specifically teach in an enhanced dRMON Managers a user is provided with the ability to combine ports and hosts in order to create Virtual LAN (VLAN) definitions to cause the monitoring function to behave as though all selected hosts were on the same LAN segment being served by the same RMON probe with the dRMON collector in this embodiment creating and maintaining several such views with each appearing as one interface to conventional RMON Management applications. Dobbins teaches in an enhanced dRMON Managers a user is provided with the ability to combine ports and hosts in order to create Virtual LAN (VLAN) definitions to cause the monitoring function to behave as though all selected hosts were on the same LAN segment being served by the same RMON probe with the dRMON collector in this embodiment creating and maintaining several such views with each appearing as one interface to conventional RMON Management applications, (e.g. col. 9, line 13 col. 10, line 5 & col. 17, lines 28 67). It would have been obvious to one skilled in the art at the time the invention was made to combine Dobbins with Raab because it would be more convenient for a system to utilize the functions of VLAN's so a user in a specific user group does not have to be connected to a same segment as

Art.Unit: 2143

the group to which it belongs to. Therefore allowing a new user and existing users the convenient of being stationed anywhere in the system and allowing the system to perceive as though the user was on the same segment.

- 10. Claim19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Raab (6047321) in view of Umetsu (5751963).
- 11. As per claim 19, Raab does not specifically teach said agents perform continual response time monitoring and forward the results to the Proxy. Umetsu teaches said agents perform continual response time monitoring and forward the results to the Proxy, (e.g. col. 4, line 50 col. 5, line 14). It would have been obvious to one skilled in the art at the time the invention was made to combine Umetsu with Raab because it would be more efficient for a system to have continual updates on network activity that could aid in the efficiency of network data transferring in network peek times.
- 12. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Raab (6047321) in view of Nugent (6076131) in further view of Engel et al. (6115393) (hereinafter Engel).
- 13. As per claim 20, as understood by the Examiner, Raab does not specifically teach said agent software utilizes native OS APIs to gather information about the ES that could not be via packet capture and analysis, such as:
- 14. (1) Network protocol stack configurations and NIC configurations including problematic situations;
- 15. (2) Application information ranging from what protocols an application is bound to, to its manufacturer, version, file date and time, DLLs used and their versions, etc.;
- 16. (3) System information such as memory, CPU, disk space, current resource utilizations, etc.; and

Art.Unit: 2143

- (4) System performance metrics. Nugent teaches said agent software utilizes native OS APIs to gather 17. information about the ES that could not be via packet capture and analysis, such as:
- (1) Network protocol stack configurations and NIC configurations including problematic situations, (e.g. 18. col. 9, lines 30 - 61). It would have been obvious to one skilled in the art at the time the invention was made to combine Nugent with Raab because it would be more efficient for a system to analyze information that could have errors in the system so to lower the probability of a system crashing or transmitting faulty information across the network. Engel teaches
- (2) Application information ranging from what protocols an application is bound to, to its manufacturer, 19. version, file date and time, DLLs used and their versions, etc., (e.g. col. 14, lines 26 – 65);
- (3) System information such as memory, CPU, disk space, current resource utilizations, etc., (e.g. col. 20. 14, lines 26 - 65); and
- (4) System performance metrics, (e.g. col. 15, line 41 col. 16, line 56). It would have been obvious to 21. one skilled in the art at the time the invention was made to combine Engel with the combine system of Raab and Nugent because it would be more efficient for a system to gather as much information about a system and its ES so if an error or an upgrade is needed it would be more convenient to find the system that require these fixes or modifications.

Conclusion

- The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 22.
- Obenhuber et al. U.S. Patent No. 6144638 discloses Multi-tenant unit. 23. a.
- Desai et al. U.S. Patent No. 5781703 discloses Intelligent remote agent for computer 24. b. performance monitoring.
- Doherty et al. U.S. Patent No. 6101170 discloses Secure fast packet switch having improved 25. C. memory utilization.
